URP 1000/32 is a versatile profile that can be used in a wide variety of applications. It makes a robust roofing sheet and can be produced in forward or reverse profile to create attractive vertical elevations. It can also be used as a lining sheet in twin skin insulated systems and as a roof liner.

Since its launch it has become our most popular profile, particularly in the industrial sector, and is available on a fast turnaround in 0.7mm Steel, and in a wide range of colours and finishes. It is also the profile that we have utilised to create our Highlight ventilated wall cladding for agricultural buildings.
